## Rotatable Propagation Grow Light

Since light intensities below a minimum will result in little or no root development while too much light can bleach leaves and reduce root formation SpecGrade LED's rotate-able and economical Illumina-24 will help create a successful propagation environment resulting in a reduction in rooting time. With 150-degrees of photon output together with a 0-10V dimmable feature the cultivator be able to balance the light intensity while aiming the photons to ensure an even blanket of light resulting in uniform rooting.
